

DEVELOPMENT of GUIDELINES

Identification of sensitive species for a refined risk assessment

Protection of endangered species and ecosystems

Search for alternative methods for vertebrate testing

Corals

Acute and Long-Term Tests

With endpoints based on necrosis, bleaching, growth rates and yields (length/biomass)

Hyalella azteca

Testing of flow-through BCF (bioconcentration factor)

Macro- and Microalgae

Various macroalgae species can be tested based on test guideline OECD 239
